

BiasAperture — Roadmap & Task Prioritization

Source: 2026-09-01_session_clarity_and_task_prioritization.md:53, BiasAperture-AT.md:374

Status: inference run is complete.

Remaining Work

Aaradhya

- Run `bias-aperture audit` on `fairface_predictions_val.csv`.
- Generate and verify the standalone HTML report with:
 - DPD, DIR, EOP, EOD
 - 95% bootstrap CIs
 - chi-squared p-values
 - `n < 30` sample guards
 - Model Card and Datasheet sections
- Add empirical tables and figures to the LaTeX report; compile `main.pdf`.
- Seal empirical claims in `CLAIM_LEDGER.md` as reproducible.

Tisha

- Contact TA Shreejan and confirm defense logistics.
- Audit the generated Model Card/Datasheet for EU AI Act Articles 10 and 13.
- Verify all 126 race × age × gender subgroup bins and sample-size enforcement.
- Prepare the regulatory and dataset sections for the presentation.

Together

- Confirm the timeline and dependencies.
- Create the 10–15 minute slide deck.
- Rehearse the live CLI demo and scrutiny questions.
- Ensure the final workflow runs end-to-end: CSV → validation → metrics → statistics → HTML report.

Questions to Ask the TA

- Proposal-defense date, duration, and required format.
- Whether both members must present and how individual contributions are graded.
- Whether slides, a live demo, or both are required.
- Whether FairFace alone is sufficient, allowing UTKFace to be removed.
- Whether the CLI and offline HTML report satisfy the deliverables.
- Whether Fairlearn, AIF360, and SHAP are all mandatory.
- Confirm the final deadline and interim milestones.
- What evidence is expected: tests, profiling, metrics, report, runtime measurements, and end-to-end audit.
